

## ABSTRACT

### Pulsar/Supernova Remnant Associations

Vicky Kaspi

Infrared Processing & Analysis Center, Jet Propulsion Laboratory/  
California Institute of Technology

Since the discovery of the first pulsar/supernova remnant association not long after the discover of pulsars themselves, the number of proposed associations has grown to nearly 20. In this talk we will critically review the known and proposed supernova remnant associations, and summarize what has been learned about the pulsar and supernova remnant populations from relevant observations.
