Subject: Abstract for Space Ops 2000 Conference

A View of the Future of NASA's Deep Space Network and Associated Systems
William Weber, Richard B. Miller, Peter Doms

This talk will describe the potential future of the Deep Space Network and other systems associated with Communications, Navigation and Operations of Deep Space Missions. William Weber is the Director for the Interplanetary Network at Caltech's Jet Propulsion Laboratory. The Interplanetary Network Directorate is responsible for managing NASA's Deep Space Network and the development of multimission systems and tools which support deep space communications, navigation, and operations.
